

Capstone Project Assignment

Responsive Web Design Challenge: Blogr Landing Page

As part of your capstone assessment for the Web Design Cohort, you are required to recreate and fully develop the **Blogr Landing Page Challenge** from [Frontend Mentor](#)

The objective of this project is to evaluate your ability to transform a UI design into a fully functional, responsive, and production-ready website using modern frontend development practices.

Project Objective

You are expected to:

- Build the complete user interface
- Ensure full responsiveness across devices
- Implement clean and maintainable code
- Demonstrate strong layout and styling skills
- Deploy the finished project online
- Manage your project professionally using GitHub

This project is intended to simulate a real-world frontend development workflow.

Project Requirements

Core Requirements

You must:

- Recreate the provided design as accurately as possible
- Build the project using HTML, CSS, and JavaScript
- Make the layout fully responsive
- Ensure proper mobile navigation functionality
- Host the project live online
- Push all source code to GitHub

Technical Expectations

Your project should demonstrate:

Responsive Design

Your website must adapt properly across:

- Mobile devices
- Tablets
- Laptops

The experience should remain visually consistent and usable across all screen sizes.

Clean Code Structure

Your codebase should reflect:

- Proper file organization
- Semantic HTML structure
- Readable and maintainable CSS
- Well-structured JavaScript
- Meaningful naming conventions

UI Accuracy

Your implementation should closely match:

- Layout spacing
- Typography
- Color usage
- Alignment
- Hover states
- Navigation behavior
- Visual hierarchy

Pixel perfection is not mandatory, but strong attention to detail is expected.

Accessibility & UX

Your project should:

- Use semantic HTML elements

- Include accessible navigation where possible
- Maintain readable contrast and spacing
- Provide smooth user interaction

Deployment

You are required to deploy your project online using platforms such as:

- [GitHub Pages](#)
- [Netlify](#)
- [Vercel](#)

Submission Requirements

Each student must submit a:

1. Live Deployed Link

A working live version of the project.

Example:

- <https://yourproject.netlify.app>

2. GitHub Repository Link

A public GitHub repository containing:

- Full source code
- Organized commits
- README file
- Proper project structure

Example:

- <https://github.com/username/project-name>

Example Submission Structure

FULL NAME: John Doe

MATRIC NUMBER: FE24/017

EMAIL ADDRESS: johndoe@gmail.com

LIVE PROJECT LINK:

<https://blogr-landing-page.vercel.app>

GITHUB REPOSITORY LINK:

<https://github.com/johndoe/blogr-landing-page>

Bonus Features (Optional but Highly Recommended)

Students who go beyond the base requirements may earn bonus points.

Examples include:

- Smooth animations
- Dark mode implementation
- Better accessibility improvements
- Performance optimization
- Advanced responsiveness
- Improved mobile interactions
- Custom loading states
- CSS architecture methodology
- Use of modern frontend tooling

Automatic Deductions

The following will reduce your score:

Non-responsive layout

Broken live link

Missing GitHub repository

Poor file structure

Plagiarized code without understanding

Incomplete sections

Console errors or broken functionality

Submission Deadline

(To be communicated by the admins)

Final Note

This capstone project is not just about completing a website, it is about demonstrating:

- Frontend problem-solving ability
- Real-world development workflow
- Professional presentation
- Technical execution
- Attention to detail

Treat this like a project for a real client, not just a classroom assignment.

Your final submission should be something you are confident adding to your portfolio and presenting during job or internship opportunities.
